

Contributions

- Provided questions to the group text chat, upon which our group leader was able to provide valuable insight that may have helped other group members who might have had similar questions.
- Worked through the assignment in Google Colab according to the instructions provided in the Module_02_Lab_Exercise.ipynb notebook and learned about many concepts pertaining to machine learning, while also utilizing AI to assist me with understanding basic concepts that were previously unfamiliar to me.
- Documented my learning experience in a separate Word document as I worked through the assignment.
- Documented my contributions in another document.
- Converted both documents, as well as the Jupyter Notebook, into PDF files, which I then proceeded to add to the group's GitHub repository for the group leader to evaluate and merge.
