

L02 Contribution Journal

Student: Joseph Clay

Group: The Turing Collective

Course: ITAI-1371 — Machine Learning Development Tools

Date: 2026-09-01

Repository: <https://github.com/ClayClimate-AI/ITAI1371-L02-ML-Dev-Tools>

This is a factual account of work performed for the group submission. It is not a reflective essay.

1. Team communication and coordination

- Proposed the group name **The Turing Collective** and coordinated the prerequisite Git assignment before lab implementation began.
 - Authored and distributed a Collaborative Git Playbook so teammates had one authoritative workflow instead of conflicting chat instructions.
 - **Created Slack channels** for the group, **offered help** there for access paths (fork vs collaborator invite), deadlines, and naming, then **closed those Slack channels** when that channel stopped being the right place to work.
 - After Prof. Rao's 2026-08-30 process change, **moved team communication to Canvas messages**: teammates send their three PDFs to Joseph; Joseph commits them and submits the public GitHub link.
 - Documented that process in docs/L02-TEAM-PDF-INTAKE.md (filenames, folders, Monday hand-off, Tuesday Canvas link).
 - Removed collaborator write access once intake moved to Canvas, so the graded tree on main stays controlled.
-

2. Repository ownership and infrastructure

Git shortlog on this repo attributes the large majority of commits to Joseph Clay (scaffold through harvest). Concrete ownership includes:

Area	What was delivered
Specs	Product_Spec.md, Tech_Spec.md, acceptance criteria, open-question tracking (OQ-1 group token resolved)
Environment gates	.venv, requirements.txt (including scikit-learn per ADR 0001), scripts/verify_setup.py, pytest suite for PipelineValidator (18 tests)
CI	.github/workflows/ci.yml — Phase 0 gates only (ADR 0002); Tech Spec amended so CI is an explicit carve-out
Lab notebook	Units A–H executed and logged in PROGRESS.md; clean run [1]→[7]; PDF export path established
Deliverables layout	deliverables/notebooks/, journals/, contributions/ with per-member FirstLast naming

Methodology artifact	The_Guardrail_Blueprint.pdf — layered guardrail model used to run the lab (published in-repo for the instructor)
Hygiene	Root PDF strays removed; Yilin files moved from repo root into the correct subfolders; README / intake docs kept aligned with Canvas

3. Individual graded artifacts (Joseph)

Deliverable	Path	Status
Notebook PDF	deliverables/notebooks/L02_JosephClay_ITAI1371.pdf	Complete
Reflective journal PDF	deliverables/journals/L02Journal_JosephClay_ITAI1371.pdf	Complete
Contribution journal PDF	deliverables/contributions/L02Contribution_JosephClay_ITAI1371.pdf	This document

4. Teammate PDF intake (as of 2026-09-01)

Member	Notebook	Journal	Contribution
Joseph Clay	Yes	Yes	Yes
Alexander Debusk	Yes	Yes	Yes
Yilin Leng	Yes (filename has spaces — left as submitted)	Yes	Yes (filename has spaces — left as submitted)
Shareefah	Pending Canvas message	Pending	Pending

No Shareefah files are on main until her three PDFs arrive via Canvas and are placed under deliverables/. Stale remote branches from the retired PR intake path are deleted so the submitted link points at a clean branch set.

5. Summary

Contribution was both **technical** (specs, gates, validator tests, CI, notebook execution, PDF harvest, repo hygiene) and **operational** (Slack standup then close-out, Canvas intake, collaborator removal, teammate file placement). The only external dependency left for a complete twelve-PDF set is Shareefah's three Canvas submissions.
